6. Acquired ISO/TS16949 Certification from 2004

"ART"

Our piston **"ART"** works to the engine of the car which continues running highly of the durability.

The load of a piston occurring by one combustion is about 5t.

135,000,000 times of combustion is generated in an engine when they run for 150,000km with 100km per an hour.

Our piston continues working in the most severe environment.

Our creative and high-quality products have earned us outstanding reputations at both domestic and offshore levels. We are constantly striving to establish and maintain international technical relationship through international sales activities, sending technical staffs and sales engineers to foreign countries. Nowadays, car manufacturers must correspond to the ever-growing demands from both consumers and global environmental issues, and the fact makes them review and improve their existing fine products. Our mission at ART, as one of the world leading piston manufacturers with the finest materials and machineries, is to continue stable development with global view, and to be relied upon in the world's piston markets.
